

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A light emitting device comprising:
 - a first pixel portion in which a plurality of first pixels are arranged in matrix **[[on]]** over a substrate; and
 - a second pixel portion in which a plurality of second pixels are arranged in matrix at a different disposition than the first pixel portion **[[on]]** over the substrate,
 - wherein each of the plurality of first pixels comprises a first light emitting element;
 - wherein each of the plurality of second pixels comprises a second light emitting element; and
 - wherein directions of light emission of the first light emitting element and the second light emitting element are reverse in front and back.

2. (Original) The light emitting device according to claim 1,
 - wherein the first light emitting element comprises a first pixel electrode, a first electroluminescent layer, and a first counter electrode;
 - wherein the first pixel portion emits light from a side of the first counter electrode;
 - wherein the second light emitting element comprises a second pixel electrode, a second electroluminescent layer, and a second counter electrode; and
 - wherein the second pixel portion emits light from a side of the second pixel electrode.

3. (Currently Amended) The light emitting device according to claim 1,
wherein the directions of light ~~emitted from~~ emission of the first light emitting element
and the second light emitting element are determined depending upon the presence or absence of
a reflecting film.

4. (Original) The light emitting device according to claim 1,
wherein a first driving portion for operating the first pixel portion, a second driving
portion for operating the second pixel portion, and a part or all of wirings for supplying a signal
and a voltage to each of the first driving portion and the second driving portion is shared; and
wherein a means for operating either of the first pixel portion or the second pixel portion
is provided.

5. (Original) An electronic apparatus using the light emitting device according to claim
1.

6. (Original) A portable phone using the light emitting device according to claim 1.

7. (Original) A personal digital assistance (PDA) using the light emitting device
according to claim 1.

8. (Currently Amended) A light emitting device comprising:
a first pixel portion in which a plurality of first pixels are arranged in matrix [[on]] over
a substrate; and
a second pixel portion in which a plurality of second pixels are arranged in matrix at a
different disposition than the first pixel portion [[on]] over the substrate,
wherein each of the plurality of first pixels comprises a first light emitting element
which emits light from a surface of the substrate in a direction from a back of the substrate to the
surface of the substrate; and

wherein each of the plurality of second pixels comprises a second light emitting element which emits light from the back of the substrate in a direction from the surface of the substrate to the back of the substrate.

9. (Original) The light emitting device according to claim 8,
wherein the first light emitting element comprises a first pixel electrode, a first electroluminescent layer, and a first counter electrode;
wherein the first pixel portion emits light from a side of the first counter electrode;
wherein the second light emitting element comprises a second pixel electrode, a second electroluminescent layer, and a second counter electrode; and
wherein the second pixel portion emits light from a side of the second pixel electrode.

10. (Currently Amended) The light emitting device according to claim 8,
wherein the directions of light emitted from emission of the first light emitting element and the second light emitting element are determined depending upon the presence or absence of a reflecting film.

11. (Original) The light emitting device according to claim 8,
wherein a first driving portion for operating the first pixel portion, a second driving portion for operating the second pixel portion, and a part or all of wirings for supplying a signal and a voltage to each of the first driving portion and the second driving portion is shared; and
wherein a means for operating either of the first pixel portion or the second pixel portion is provided.

12. (Original) An electronic apparatus using the light emitting device according to claim 8.

13. (Original) A portable phone using the light emitting device according to claim 8.
